EDL HAUS RESTAURANT SOUND SYSTEM

Bratislava, Slovakia

RESTAURANT SOUND SYSTEM

In the EDL Haus restaurant, we implemented a complete interior sound system — designing a professional multi-zone audio setup that create a pleasant atmosphere during regular operations as well as private events.

MULTI-ZONE SOUND SYSTEM FOR THE RESTAURANT

The restaurant space was divided into several independent audio zones, including the main area, private lounge, lower section, and restrooms. Each zone is equipped with high-quality speakers, ensuring even sound coverage and a comfortable listening experience for guests throughout the entire space.

PROFESSIONAL AUDIO SYSTEM

We designed and installed a professional audio solution for the restaurant, enabling high-quality music playback while providing flexibility for various operational scenarios. The system is ready for daily use as well as special events.

SIMPLE CONTROL

To ensure maximum convenience for the staff, the entire system was designed for intuitive operation via a simple control panel located behind the bar. The staff can quickly adjust volume, switch music sources, and manage individual zones — all conveniently from a single location.

SOUND AS PART OF THE ATMOSPHERE

The sound system was thoughtfully integrated into the interior design so as not to disrupt the aesthetics of the space, while enhancing the overall atmosphere of the restaurant. The result is natural, unobtrusive audio that complements the guests' dining experience.
