

CASE STUDY

ADMINISTRATIVE COMPLEX ROSUM

Bratislava, Slovakia

AUDIOVISUAL SOLUTION FOR A CONFERENCE SPACE

For the ROSUM administrative complex in Bratislava, we designed and implemented a complete technological setup for a multifunctional hall. The goal was to create a modern and reliable environment for conferences, training sessions, and hybrid events regularly held in the space.

VIDEO PROJECTION AND PRESENTATION TECHNOLOGY

To ensure high-quality content display, we implemented a powerful projector from NEC, combined with a professional AV Stumpfl projection screen.

The system is complemented by Atlona wireless content sharing, allowing presenters to instantly present from their own devices without the need for a wired connection.

PROFESSIONAL SOUND SYSTEM AND CONFERENCING

Clear voice transmission is ensured by a Shure wireless microphone system and Equipson speakers, which provide even sound coverage throughout the entire space. For online streaming and hybrid meetings, we integrated a video conferencing camera that accurately captures the activity in the hall for remote participants.

INTUITIVE CENTRAL CONTROL

All installed technologies are integrated into a Crestron control system, which the user operates via a central touchscreen panel. The system is programmed so that even less technically experienced users can easily start a presentation, adjust the volume, or switch between video inputs.
