

CASE STUDY

**MODERNIZATION OF THE UNIVERSITY
DEAN'S OFFICE BOARDROOM**

REPRESENTATIVE SPACE FREE OF VISUAL CLUTTER

As part of this project for the university dean's office, the goal was to create a modern boardroom suitable for presentations, academic defenses, and international online meetings. A key requirement from the management team was a “clean desk” concept — a workspace free of visible cables and equipment, with all technology seamlessly integrated into the room’s architecture.

AUDIO SOLUTION

The primary objective was to ensure exceptional speech intelligibility without introducing distracting elements onto the meeting table. Two SHURE MXA920 ceiling microphone arrays provide accurate and natural voice capture without the need for tabletop microphones. Additional Equipson WORK ceiling speakers deliver consistent and evenly distributed audio coverage throughout the room.

VIDEO AND INTELLIGENT COMMUNICATION

The system is fully prepared for hybrid collaboration and automated meeting tracking. The video solution, based on two Yealink PTZ cameras, features automatic camera switching that follows the currently active speaker. For intuitive operation, users have access to a Yealink touch control panel and a wireless content-sharing system, enabling seamless collaboration and presentation management.

DISPLAY TECHNOLOGY

To preserve the room's clean and elegant design, a retractable AV Stumpfl projection screen was installed in combination with a professional Epson projector, delivering high-quality visuals suitable for both presentations and detailed content display.

THE RESULT

The dean's office now benefits from a versatile and prestigious meeting space that meets the demanding requirements of the academic environment. Technology is present exactly where it is needed while remaining discreetly integrated into the space. The system offers intuitive operation even for users without specialized technical knowledge. The room now fully supports natural communication, professional presentations, and high-quality online meetings.
